Law Enforcement

Quickly Screen Public Safety Personnel

Introducing EyeDetect — the scientifically validated, cost–effective way to hire credible, trustworthy job applicants.

EyeDetect®
The eyes don't lie.

Preserve Your Reputation

Law enforcement agencies are tasked with the critical responsibility to safeguard citizens and communities. But it all starts by effectively pre-screening job applicants and periodically screening all current personnel, without bias, for positions such as police officers, sheriffs, dispatchers, jailers, etc.

If your agency uses a Law Enforcement Pre-Employment Test (LEPET), you can rely on a new lie detection technology called EyeDetect to help automate and greatly streamline the credibility assessment phase of the hiring process. The EyeDetect LEPET can be customized to meet your specific needs. It accurately measures the truthfulness about an applicant's past drug history, criminal behavior (whether caught or not), and accuracy when completing the job application, or any other critical issue of concern.

Best of all, EyeDetect never gets tired or influenced. It's 100% unbiased and will never discriminate based on gender, race or color.

What is EyeDetect?

Deception causes subtle changes in the behavior of the human eye due to increased cognitive load. EyeDetect uses a high-speed, infrared eye-tracking camera to measure these subtle changes, and then combines the measures in a mathematically optimal manner to detect deception with an 86% accuracy.

How EyeDetect Makes Screening Law Enforcement Candidates Easier

Dishonest Candidates – Quickly eliminate candidates showing signs of deception.

Honest Candidates – Focus on candidates with no indicators of deception.

Unbiased – EyeDetect is automated and will not show bias or discrimination.

Fast Results – Tests take 30 minutes and results are ready within 5 minutes.

Nonintrusive – No uncomfortable cables or sensors are attached to the examinee.

Easy to Train Proctors – An EyeDetect Test Proctor and Dashboard Administrator can be trained in less than 3 hours.

Efficient – During an average eight-hour workday, test proctors with three stations can run about 30 tests daily.

Portable – EyeDetect instruments are portable and can easily be moved to other locations.

How EyeDetect Works

1. Examinee takes 30-minute true/false test.
2. Data captured, encrypted and uploaded to a secure server in the cloud.
3. Proprietary algorithms interpret the data and provide a report with the Converus Credibility Score in less than 5 minutes.

EyeDetect Station Includes:

- Intel NUC computer, mouse and keyboard
- infrared eye-tracking camera
- a library of custom tests for law enforcement, corrections and DAs
- chin rest
- technical support (business hours)
- test scoring licenses that don't expire
- software updates

"We think that we will have a better screened candidate who will be a better employee for the department for years to come."

– Lt. LaMar Ewell. Salt Lake City PD

"EyeDetect helps us quickly identify who would make a good police officer and who would cause us a lot of concern. So far, it's been a huge success."

– Ken Thomas, Chief of Police, Kent City PD
